

Homologation management

PROSE offers professional homologation management support. The ongoing tightening and evolution of national and international regulations are making homologation processes ever more complex, particularly if the rolling stock is to operate across borders. Homologation authorities increasingly require comprehensive supporting documentation, including measurements, records and expert assessments.

- Homologation plan
- Homologation strategy
- Homologation concept
- Homologation dossier
- Responsibility for the whole homologation process

Contact us

PROSE first investigates requirements and defines a homologation plan in close collaboration with the customer. Having familiarised themselves with the specific situation, our consultants prepare a customised homologation strategy, either as a general contractor or as an integral part of our customer's existing team. PROSE can identify the homologation process that best meets your needs. We can either develop a homologation concept, deliver a comprehensive homologation dossier that is ready for submission, or assume responsibility for the whole homologation process until it is complete. Our extensive network enables PROSE to coordinate all national and international parties involved in this process. We also provide documentation support and take care of administrative and technical issues, which allows you to focus on your core business.
