

Manufacturing supervision

- Supervision of fabrication and assembly
- Coordination of manufacturing phases
- Change management
- Monitoring and coordination of sub-suppliers' manufacturing processes

Contact us

Manufacturing is a difficult business, which is often prone to errors. Failure to supervise manufacturing and assembly processes can lead to faults, scheduling problems and cost overruns. To avoid these problems, we can assist you throughout the manufacturing process. To handle complexity efficiently and master time management in the manufacturing process, our engineers, designers, and project and quality managers apply all tools of the relevant technical disciplines.

PROSE supervises fabrication and assembly and coordinates all manufacturing phases, including change management. We can also monitor the work of sub-suppliers on your behalf, based on a defined plan. This means that all processes related to manufacturing are centrally coordinated by the same company, regardless of whether they're from the same supplier or not. This enables us to deliver A-Z manufacturing supervision solutions.
