

PROSE offers training services that meet your individual requirements. In close collaboration with the customer, we first define training objectives and needs. We then prepare customised courses and guest lectures that can range from a basic introduction to electrical traction systems to advanced courses on specialised topics.

- Introduction to electric traction systems
- Advanced electric traction engineering
- Custom courses
- Professional training course on brake systems for railway vehicles
- Guest lectures

Introduction to electric traction systems

This basic course is aimed at people who work in the rail industry and wish to develop a deeper understanding of modern rail vehicles. In it, PROSE offers an overview of electric traction systems for railways.

Advanced electric traction engineering

This advanced course is for professionals such as engineers and maintenance personnel who wish to deepen their knowledge of the different systems present in trains - such as auxiliary power and battery systems, dynamic braking and traction units.

Custom courses

Our experienced trainers can provide a wide range of basic and advanced courses in the field of electric traction systems.

Professional training course on brake systems for railway vehicles

This course is for specialists such as engineers and maintenance personnel who wish to deepen their knowledge of brake systems for railway vehicles. Topics include what place brakes have in the railway system, requirements for brakes and essential brake components. The course will also provide an overview of brake-system design and of corresponding standards and regulations. If desired, special topics such as slide protection can be examined in more detail.

Guest lectures

PROSE offers a wide range of guest lectures based on our customers' needs and preferences. Contact us today for more information on our courses and lectures.
